

SERIES TCJ

FOR EXTERNAL LUBRICATION

SERIES TCJ

Application possibilities and advantages of the TCJ series

If you use a fluid or fluids up to a viscosity of max. 100 mm²/s at 20 °C (except for substances containing paint, resin and glue), then our self-priming systems of the TCJ series are just the right thing for you.

The advantage of our TCJ system is that it reduces and prevents dirt ingress into your process.

Our 10- and 25-litre systems are adapted to commercially available fluid containers. This allows the container to be directly changed — without cumbersome refilling. The result is no dirt in the container and thus a process that continues to function optimally.

TECHNICAL SPECIFICATIONS

- Connection possibilities for up to six spray heads.
- Container available in 2,5 to 20 Liter
- Optional Level control
- Control via 24 V DC electrical valves as standard.
Pneumatic and other electrical valve voltages on request.
