

# LSJ MINI

PRETTY MINI FOR THE INTERNAL LUBRICATION

## LSJ MINI

Your introduction to internal lubrication with MQL.

**Concentrated power paired with the simplest operation and attractive price. In our LSJ Mini we have combined all the advantages of the big brother LSJ Z35 with a compact design.**

The pressure can be optimally adapted to your requirements by means of manually adjustable pressure regulators. Due to the additional possibility to regulate the aerosol saturation directly at the container you always get an optimal spray result. Due to the unique possibility of operating our Mini LSJ up to an operating pressure of up to 15 bar, even demanding machining can be realized.

This system can be optimally used with always consistent tool operations. Once optimally adjusted, we offer you an absolutely reliable system.

Optimal use from a cooling channel cross section of 0.9 mm<sup>2</sup>.

### APPLICATION

- Optimal use from a cooling channel cross section of 0.9 mm<sup>2</sup>.
- Manual adjustment of the print parameters
- Optimally suited for consistent series processes with one parameter

### FUNCTION

- Simple control via 2 valves
- Easy installation
- Generation of a uniform aerosol film
- Switching KSS / MMKS possible
